

# BELT LOADER INFO SHEET

## BELT LOADERS

Belt loaders are vehicles with conveyor belts for unloading and loading of baggage and cargo onto aircraft.

A belt loader is positioned at the door sill of an aircraft hold (baggage compartment) during operation. Belt loaders are used for narrow body aircraft, and the bulk hold of wide body aircraft.

Here at Airside we design and manufacture our own range of Belt Loaders – Jet-Loaders. We are able to make these to bespoke units to you specific requirements and in a variety of forms:

- Towable, Self propelled or Pedestrian controlled.
- Diesel, Electric, Petrol, LPG
- Boom lengths up to 9m
- Manufactured to IATA and CEN legislation

The company takes pride in its range of core products manufactured to a high standard of quality together with superbly finished refurbished units. After sales is paramount coupled with comprehensive spares availability for all types of ground support equipment.
